

Tough problems?

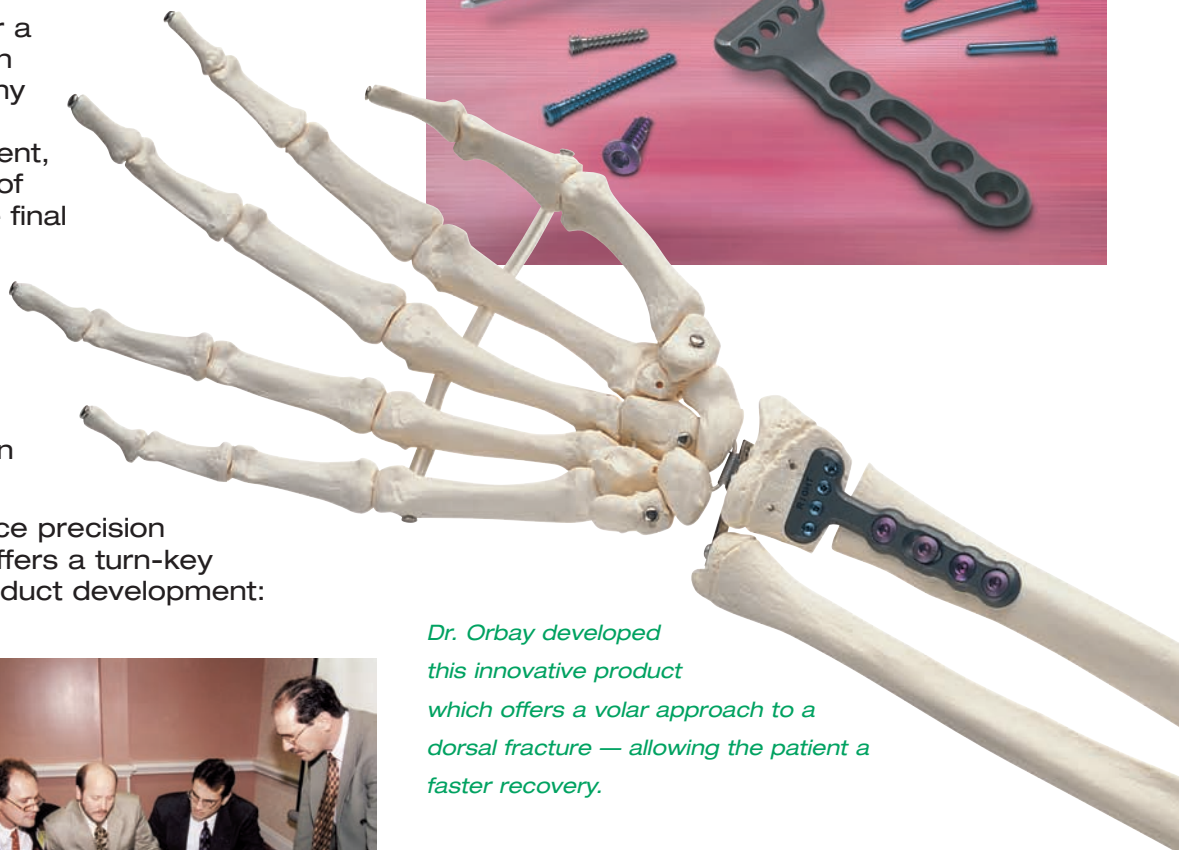

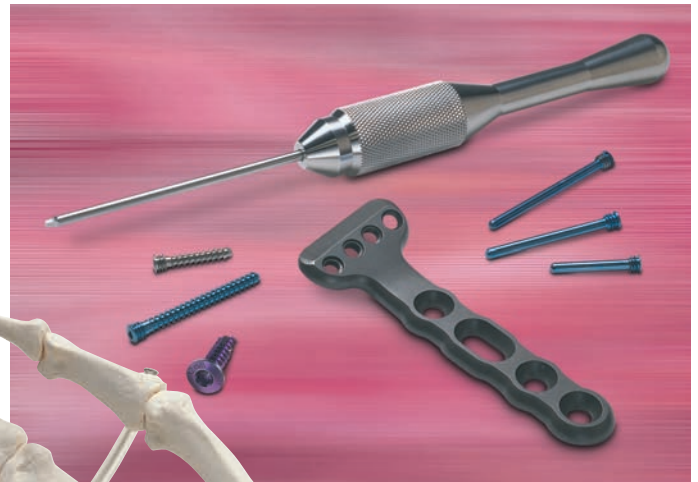

WE CAN LEND A HAND!

When Dr. Orbay of Hand Innovations had an idea for a better way to heal a broken wrist, he needed a company that could assist in design engineering and development, provide quick turn-around of prototypes, and help make final components available as fast as possible.

TRU Machine has taken Dr. Orbay's "idea" and helped turn it into a marketable product complete with surgical screws and an installation device.

TRU Machine is a full-service precision machining company that offers a turn-key approach for your new product development:

- Product Design
- Engineering Assistance
- In-house Tooling
- Material Selection
- Precision Machining
- Product Assembly
- ISO 9001:2000 and ISO 13485:2003 Certified

Dr. Orbay developed this innovative product which offers a volar approach to a dorsal fracture — allowing the patient a faster recovery.

Pictured here from left to right: Dr. Jorge Orbay of Hand Innovations, Gary Woody of TRU Machine, Javier Castaneda and Ernie Hernandez, also of Hand Innovations.

Let TRU Machine lend your company a helping hand.

From surgical devices to aerospace components, TRU Machine can help you solve even your toughest machining challenges. Since 1968, companies have looked to us for design assistance, material selection, tooling, production expertise and quality control procedures.
